

Tungsten Copper Sheet & Plate

Versatility, Durability and Cost-Effective Performance

Tungsten Copper products, a staple of the refractory metals industry, are serving growing demands in high technology applications, such as major electronics equipment, security devices, weighted shims, EDM and more.

Rhenium Alloys provides these industries with sheet and foil products that deliver optimum quality to meet all specifications for functional performance, precise sizes, finish and packaging to suit customer requirements.

Our **Tungsten Copper** products are preferred where high density, high thermal conductivity or low thermal expansions are critical.

We work closely with our customers' design engineering and production people to meet all end-use and manufacturing demands.

Advanced Metallurgy and Metal Forming is what sets Rhenium Alloys apart.

Growing Applications

- Security Screening Devices
- High Power Semiconductor Devices

Best Value

- Top Quality & Performance at Low Cost
- Customized Solutions for New Applications
- Speed to Market
